

Introducing inventAIRy XL

Streamline and
enhance your
perpetual
inventory counts

With inventAIRy XL, you can revolutionise your warehouse by:

**Removing
human
error**

**Increasing
stock
accuracy**

**Reducing
health &
safety risk**

Don't get left behind

54%

of companies are increasing their investment in inventory and network optimisation tech

53%

of companies are increasing their investment in robotics and automation tech

52%

of companies are increasing their investment in sensors and automation identification tech

Greater accuracy

A study by Auburn University's RFID Lab showed that average inventory accuracy for companies ranges from 65% to 75%. That's because even technology like SKUs and barcode scanning are prone to human error as long as there's a human on the other end of the scanner!

inventAIry XL works with all your existing systems and methods – with the exception of the inaccurate human. It delivers 99% accuracy without the need to completely overhaul your warehouse.

**“The future of
warehousing!**

**What an amazing,
well-engineered
piece of technology
that will not only
save time and improve
productivity, but also have
a positive impact in regards
to health and safety.”**

Jonathan Borg

Stock Control & Systems Manager, PD Ports

Reduced health and safety risk

The logistics industry loses an estimated £67 billion in costs every week to serious, non-fatal injuries worldwide.

Many of those injuries will have been suffered while performing a task that could easily be automated.

Are you putting your team at unnecessary risk? If so, robots may be the answer.

Is your business future-proofed?

Did you know - to protect themselves from future global disruptions...

42%

of logistics companies are planning to pilot new technologies

39%

are increasing their innovation budget

Combat staff shortages

3PL providers said finding, retaining and training staff were among the main challenges they faced.

A City & Guilds report estimated the logistics sector faced a 400,000 staff shortfall by 2026, while the Chartered Institute of Logistics and Transport reported that 80% of businesses in the sector are reporting understaffing.

These issues have been exacerbated by Brexit - but automation can help combat these challenges.

“Technology is critical to support our rapid human-centred growth throughout Europe.

“I am happy to share our latest advance in inventory management, that works to create and preserve meaningful and progressive jobs.”

Nick Robson

Head of robotics & automation, Huboo

Cut operating costs

Studies estimated that 65% of a warehouse's operating budget is attributed to labour.

Staff shortages - which are getting increasingly problematic - mean logistics companies are having to pay higher wages than ever, while the increasing demands of online shoppers is putting more strain on supply chain service providers.

Embracing automation can help reduce those labour costs.
